Strengthening Public Administrations in the design of clean and just energy transition plans

ENTRACK is an EU project, co-funded under the LIFE programme, offering technical support to clean energy transition plans and strategies in rural municipalities and regions. It aims to contribute to the speeding up of the transition to climate neutrality by increasing the energy policy capacities of eight Mediterranean small-medium sized rural municipalities.

The project, involving the municipalities of Piano di Sorrento and Vico Equense, will be presented during a public meeting scheduled for **29 October at 6:00 p.m.** in the Council Chamber of the Piano di Sorrento Town Hall. Representatives from the municipal administrations of both Piano di Sorrento and Vico Equense, as well as European technical partners, will participate in the event. The meeting is open to the media, industry stakeholders, and citizens.

ENTRACK Partners

In addition to the municipalities of Piano di Sorrento and Vico Equense, representing Italy, the ENTRACK project also includes two municipalities from Greece (Topeiros and Avdira), two from Portugal (Ponte de Sor and Gavião) and two from Spain (Gombrèn and Sant Quirze de Besora). The project is coordinated by AISFOR SRL.
